

Directions: In the first column, write psuedocode with nested If - Else statements. Wait for instruction on the second column.

Name: _____

If it is the weekend, the program writes "You can sleep in". Otherwise it writes "Wake up for school".

If the user is a teenager, the program writes "You are a teenager". Otherwise it writes "You are not a teenager". (You can assume there is a variable called **age** that you can refer to).

The answer to a computer generated multiple choice question is both B and C. If the user clicks the right answers, the program write "You are correct". Otherwise it writes "Better luck next time". (You can assume there is a variable called **answer** that you can refer to).
