Discuss what you have learned and come up with 3 questions pertaining to: If the government did not mandate vaccines, would you vaccinate your child? Why or Why not?

Questions should be well thought out and show understanding of the material covered:

1. What is the risk-benefit ratio of various vaccines?

2. How likely is a non-vaccinated child going to get sick?

3. Can certain vaccinations be linked to any diseases?

Final Assessment:

Design and create a visual representation of your answer to "Would you vaccinate your child?" citing justification and illustrating points. Your three questions listed above should be answered in your visual. Visual may be in the form of a presentation board, an annotated slideshow or an infographic.

Finished projects will be ‘presented’ on Tuesday, November 22 in the library.
